Bethany Beach Firefly Pumpkin

CUT ON THE DASHED LINE

1. Print this page on plain printer paper. Set your printer to 100% (actual size).
2. Cut out the pattern on the dashed line and tape it flat against your cleaned-out pumpkin.
3. With a pushpin, poke small holes close together along every edge of the black shapes.
4. Peel off the paper, connect the dots, and carve out the black shapes.
5. Light it with a flameless candle and watch your firefly glow.

Tip: the antennae and legs are thin. Scrape away just the orange skin there instead of cutting all the way through, and they'll glow softly.
